Emergency Medications

	Nursing communication
	NULL SIGNS, if patients has suspected hypersensitivity or infusion reaction:
	VITAL SIGNS: It patients has suspected hypersensitivity of iminutes until stable; then every 15 minutes until stable; then every 15 minute
	Lety of minutes and stable, delifered to minutes and symptoms resolved. Last released: Never
	Nursing communication
	PULSE OXIMETRY: For suspected hypersensitivity or infusion reaction, initiate pulse oximetry monitoring
	May discontinue once symptoms resolve.
	Last released: Never
-	sodium chloride 0.9 % bolus 500 mL
	500 mL, intravenous, Once as needed, for hypotensive management (systolic BP below 90 mmHg), Starting when released, Until Discontinued **RUN WIDE OPEN AND AWAIT PHYSICIAN ORDERS**
	Last released: Never
4	acetaminophen (TYLENOL) tablet 650 mg
	650 mg, oral, Once as needed, generalized pain, back pain, headache, temperature greater than 100.5 degrees F, abdominal cramping. Starting when released, Until Discontinued Last released: Never
-	albuterol 2.5 mg /3 mL (0.083 %) nebulizer solution 2.5 mg
	2.5 mg, nebulization, Every 10 min PRN, wheezing, bronchospasm, hypoxemia, dyspnea, Starting when released, for 2 doses
	May repeat x 1 if symptoms unresolved.
	Administer with 8L of oxygen.
	Last released: Never
6	EPINEPHrine (EPIPEN) 0.3 mg/0.3 mL injection 0.3 mg
	0.3 mg, intramuscular, Every 15 min PRN, SBP less than 90 mmHg, mild to moderate anaphylaxis, Starting when released, for 3 doses
	May repeat x 2 as needed
	Last released: Never
	famotidine (PF) (PEPCID) injection 20 mg
	20 mg, intravenous, Administer over 2 Minutes, Once as needed, severe hypersensitivity / infusion reaction (grade 3), including hypoxemia, dyspnea, bradycardia or tachycardia, chest pain/
	pressure, cognitive changes, systolic BP 80-90 mmHg, generalized rash, Starting when released, Until Discontinued Dilute with 10 mL of 0.9% Normal Saline.
	Druck with 10 file 30 0.55% (Windia Same). If Push over at least 2 minutes; (if not given within the last 6 hours)
	Last released: Never
-	diphenhydrAMINE (BENADRYL) injection 50 mg
	50 mg, intravenous, Once as needed, severe hypersensitivity / infusion reaction (grade 3), including hypoxemia, dyspnea, bradycardia or tachycardia, chest pain/ pressure, cognitive changes,
	systolic BP 80-90 mmHg, generalized rash, Starting when released, Until Discontinued
	If not given within past 2 hours
	If patient has severe hypotension, give after hypotensive episode is resolved
	Use with caution in patients over 60 years of age, or history of asthma
	Last released: Never
-	diphenhydrAMINE (BENADRYL) injection 25 mg
	25 mg, intravenous, Once as needed, moderate hypersensitivity / infusion reaction (grade 2) including flushing, dizziness, back pain, rigors, localized rash/hives, pruritis, nausea, vomiting,
	abdominal cramping, temperature greater than 100.5, uneasiness, agitation, feeling of impending doom, Starting when released, Until Discontinued **Use with caution in patients over 60 yrs of age, or history of asthma**
	The with caution in patients over ou yrs or age, or nistory or astrimatical test released. Never
	Last released: Never hydrocritisone sod succ (PF) injection 100 mg
	nyarroctutorine sou succ. (ry.) injection for imp. 100 mg, intravenous, Once as needed, severe hypersensitivity / infusion reaction (grade 3), including hypoxemia, dyspnea, bradycardia or tachycardia, chest pain/ pressure, cognitive changes
	Too mg, intravenous, once as needed, severe hypersensitivity / infusion reaction (grade 5), including hypoxemia, dysphea, dradycardia or tachycardia, chest pain/ pressure, cognitive changes systolic 8P 80-90 mmHg, generalized rash, Starting when released, Until Discontinued Last released: Never
